WHERE THE ROADS END

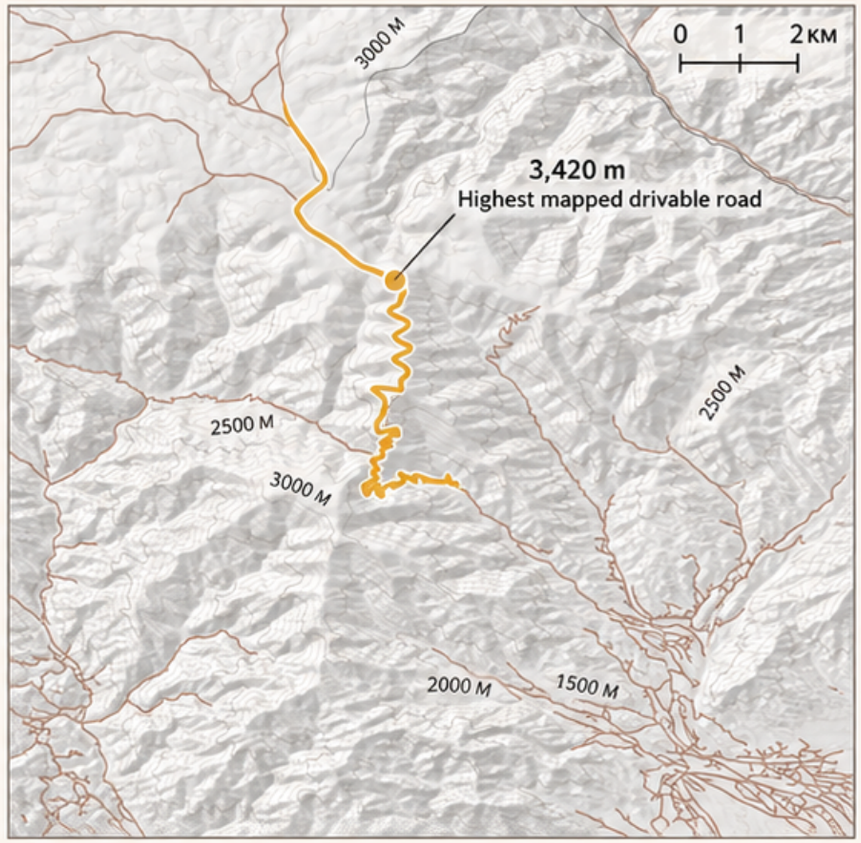

How high can roads take you in Uzbekistan?

Zomin

2,447 m

Highest explicitly mapped asphalt

Pop

3,420 m

Highest mapped drivable road

Where the Roads End

The highest roads in Uzbekistan, based on OpenStreetMap and satellite elevation data.

The question

How high do Uzbekistan's roads go? Using open data, we mapped the highest accessible roads in the country.

Method

Road data
Download drivable roads from OpenStreetMap (automobile classes + tracks).

Elevation
Sample road elevations from Copernicus DEM (30 m resolution).

Find maxima
Calculate the highest point along each road and identify the top candidates.

Map & explore
Visualize the highest roads and check their context in QGIS.

Key findings

3,420 m — **Highest mapped drivable road**
Pop, Namangan region
(OSM highway=track)

2,447 m — **Highest explicitly mapped asphalt**
Zomin, Jizzakh region
(OSM surface=asphalt)

What it means

- Uzbekistan's road network reaches above 3,400 m in the mountains of Namangan region.
- The highest road with explicitly confirmed asphalt reaches 2,447 m in Zomin.

Caveats

OpenStreetMap does not fully describe road surface types. The 3,420 m road is tagged as a track, which may be difficult or impassable for regular vehicles.

Data: OpenStreetMap (Nov 2026) · Copernicus DEM (30 m) · Processed in QGIS
