# Can Mountains Be Clustered by Terrain?

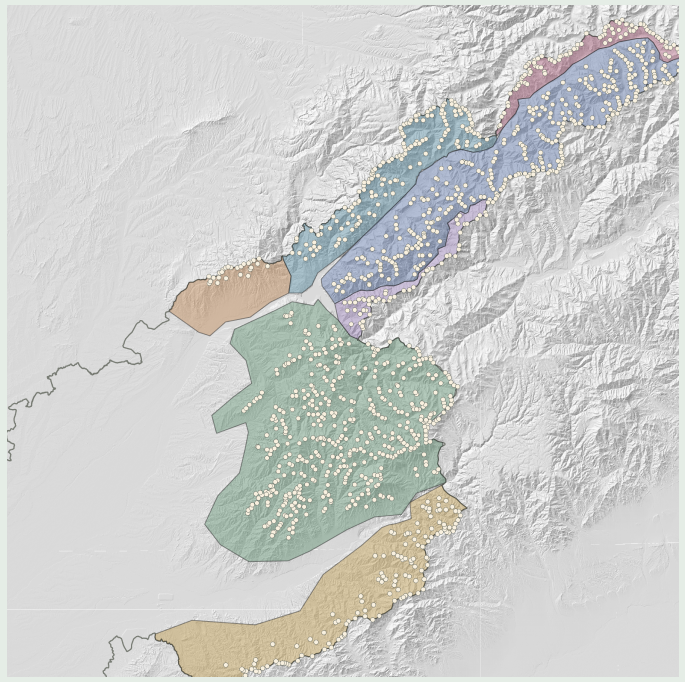

The same 1,302 mountain peaks, grouped three different ways across the Tashkent region.

| 7 | 16 | 32 |
|---|---|---|
| HUMAN | SPATIAL | TERRAIN |

A terrain-aware model detects more local subdivisions, but doesn't necessarily align better with manually interpreted ridges.

## HUMAN-INTERPRETED

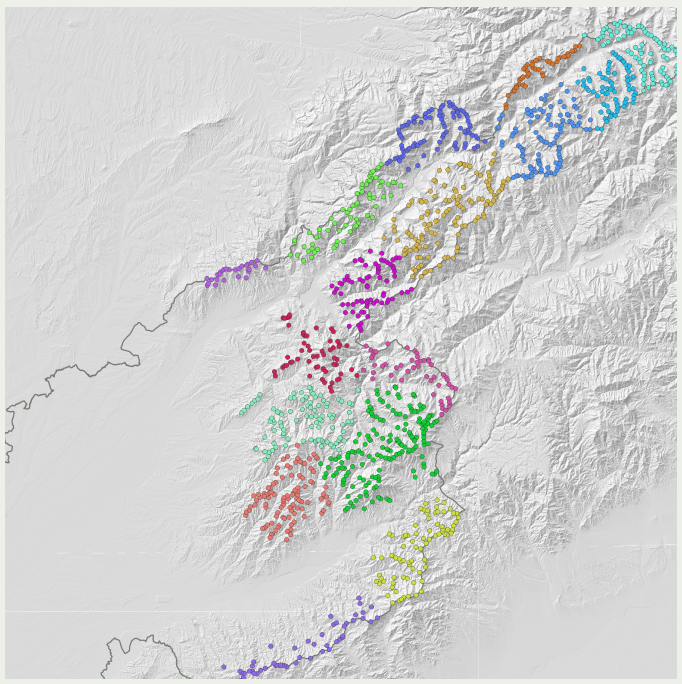

7 manually delineated ridge regions

**7** GROUPS — Same extent · EPSG:32642

## SPATIAL-ONLY

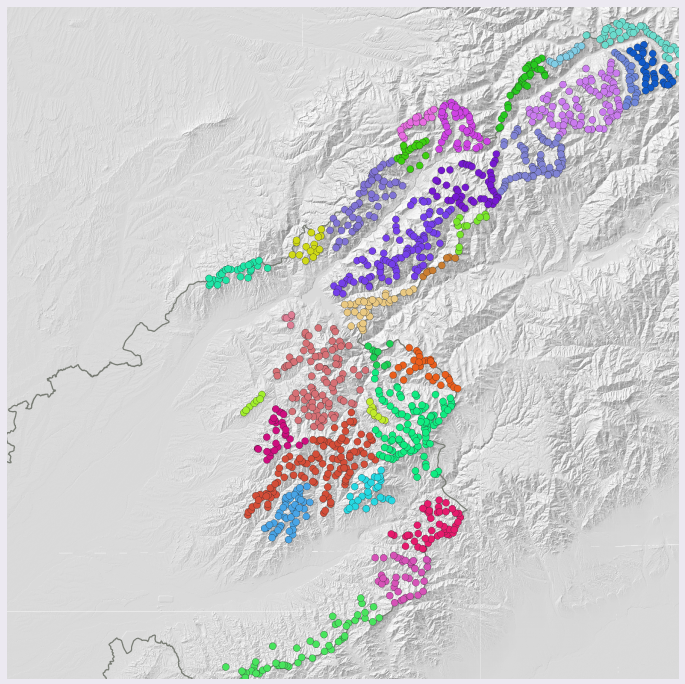

16 clusters · kNN graph + Louvain

**16** GROUPS — Same extent · EPSG:32642

## TERRAIN-AWARE

32 clusters · local saddle 3 km

**32** GROUPS — Same extent · EPSG:32642
